Note, That a  
Bands for a quar-  
ter of a part, is for  
half a part, and c  
for three quarters.

To find the hour of the Day by this Table.

Take a Staff of what Length you please, (with a pair of Com-  
passes) divide it into 10 equal parts, marking them upon the Staff;  
then in some plain level place, where the Sun doth shine, set it up-  
right, and mark where the end of the shadow thereof falls; which  
done, measure with your Staff the length of the shadow, & note the  
parts it contains, which find out in this Table, against the day of  
the Month, and over head you have the true Hour of the Day.

Suppose the 9 of April or 13 of August, I should find the shadow  
of the Staff to be 30 parts, or a quar. (that is 3 Staffs length & a q.)  
therefore looking in the Tab. against the said days, I see overhead  
that it is then either 7 in the morn. or 5 in the aftern. so that if  
your observation was in the morn. it was 7 if the aftern. 5 a clock.  
by this Example, you may see the ease & excellent Use of the  
Table, which is as ready as any portable Sundial: So  
that where'er you are, or travel, you may (having this  
Book about you) exactly know the true Time, &c.

Manilius upon the twelve Signs.

The Princely Ram clad in his Golden Wool,  
Looks back, admiring, to behold the Bull  
Against him rise, who with a cheerful Face,  
Calls to the Twins, to bid them mend their pace.  
The Crab these follows, and the Lion than,  
Next the Celestial Plant (not known by Man)  
Eris comes after, who (lest time should fail)  
Weighs out the Days and Nights in Equall scale,  
And calls the Scorpion on, who in his Train,  
Bears a bright fulgent Star, at which (in vain)  
The Centaur (with his string drawn to his Ear)  
Aims his keen shaft. The Goat soon next appear,  
That's & appearing called, who oft-times lowers,  
Because to quench his Thirst, Aquarius pours  
His Laver forth: he next after him is placed  
Pisces, which of the Twelve Signs are the last.

# A Description of the four Quarters of the Year, and first of Winter.

*Sol in Capricorn, Aquarius, Pifces.*

**A**CCORDING to the custom of Writers in this kind, Winter-quarter is the first quarter, which took beginning the 21 day of December, at which time the Sun enter'd into the first degree of the cold and dry Sign Capricorn, being the most remote from us, in his farthest South Declination, causing the days with us to be shortest, and the nights longest. This quarter continues until the Sun hath slowly passed through Capricorn, Aquarius, and Pifces: and doth partially resemble Old Age.

*Of the Spring. Sol in Aries, Taurus, Gemini.*

**T**HIS quarter doth take beginning the 21 of March, at which time the Sun entereth into the first minute of Aries, making equal day and night: and continues whilst the Sun is passing through Aries, Taurus and Gemini. This quarter doth resemble Growing Youth.

*Of Summer. Sol in Cancer, Leo, Virgo.*

**T**HE Summer-quarter doth take his beginning when the Sun enters into the first degree of Cancer, which will be this year on the 21 of June, and continues whilst the Sun passeth through Cancer, Leo, Virgo. Now the days are longest, and the air hottest; therefore but for necessity, bid Physick adieu.

*Of Autumn. Sol in Libra, Scorpio, Sagittarius.*

**A**UTUMN, or the third quarter (commonly called the Fall of the Leaf, or some the latter Spring) Begins when the Sun enters into the first degree of Libra, again making the day and night of equal length: which will be this year the 21 of September, and continues whilst the Sun passeth through Libra, Scorpio, and Sagittarius. This quarter doth fully resemble Declining Age, and the black Complexion.
